

UNITED PIPELINE WELDTITE® CRA WELDED CONNECTION

For welded pipelines

WeldTite® CRA Welded Connection

United Pipeline's WeldTite® CRA welded connection allows for the connection of two thermoplastic lined sections of steel pipe without the use of flanges. The connection creates an end seal on the thermoplastic liner which is tested to over 9,000 psi and restrains thermoplastic liner ends from pull-out. All wetted materials are either thermoplastic or Corrosion Resistant Alloy (CRA).

Other Features

- US and international patents
- Installation and operation complies with pipeline codes: ASME B31.3, ASME B31.4 and ASME B31.8
- United Pipeline has installed more than 200 of these connectors to date
